1. Program information

1.1 Description

The CX3000 Configurator is a program to easily set up and configure a CX3000 unit with built-in EXcon Master. With a few simple selections, you can quickly find the correct accessories and automatically configure the CX3000 accordingly.

Installation of the CX3000 Configurator

Download the CX3000 Configurator program from EXHAUSTO's website.

The program can be found under:

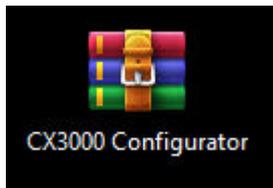

<https://www.exhausto.dk/produkter/Ceiling-counterflow/CX3000>

or

under download section for documents:

<https://www.exhausto.dk/service/download> and also under CX3000.

The program is downloaded as a ZIP file:

The program *does not* need to be installed as it is executable, i.e. it can be opened directly without installation.

This also means that you can open the program directly from the ZIP file by double-clicking on the .exe file:

Name	Size	Packed	Type	Modified	CRC32
..			Filmappe		
app.publish			Filmappe		
CX3000 Configurator.application	1.943	727	Application Manif...	16-02-2023 09:16	10038373
CX3000 Configurator.exe	1.652.224	1.173.131	Program	16-02-2023 09:16	54AD747E
CX3000 Configurator.exe.config	189	139	Configuration Sou...	22-01-2023 12:58	63E8D557
CX3000 Configurator.exe.manifest	5.142	1.693	MANIFEST-fil	16-02-2023 09:16	5101D5D3
CX3000 Configurator.pdb	87.552	20.033	Program Debug D...	16-02-2023 09:16	61623579

or

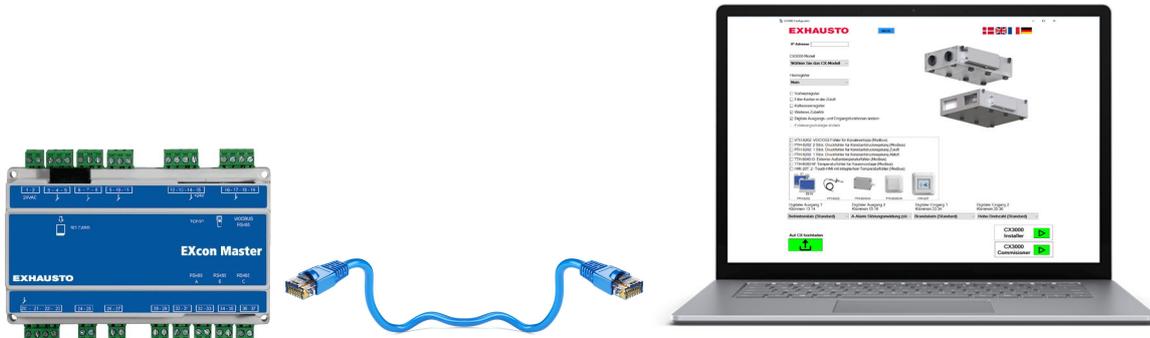

choose to extract the ZIP file to a specific location on the PC and then open the program by double-clicking on the .exe file:

Navn	Ændringsdato	Type	Størrelse

1.2 Connection of EXcon

Connect EXcon Master to PC via an RJ45 Ethernet cable as shown.

Check and, if needed, set the IP address in EXcon Master via the HMI panel so that it is in the same range as on the PC.

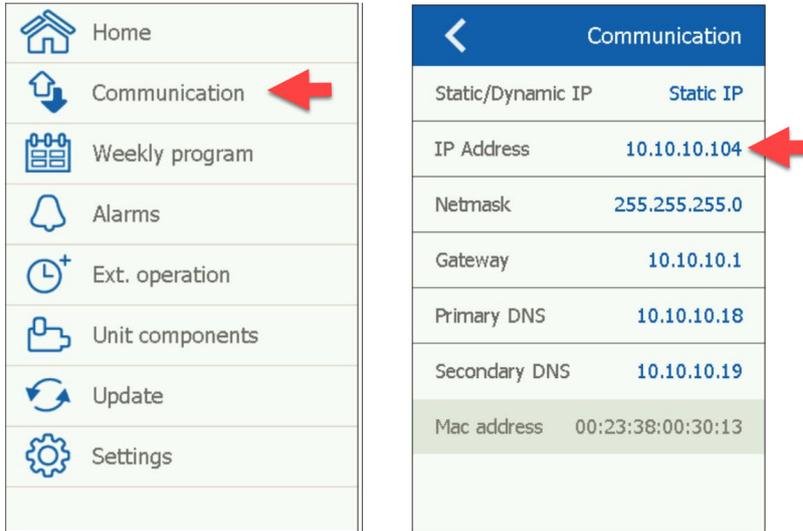

1.3 Quick Guide

Steps 1-10

1. Enter the correct IP address for the CX3000 unit connected.

The IP address can be found in the HMI panel:

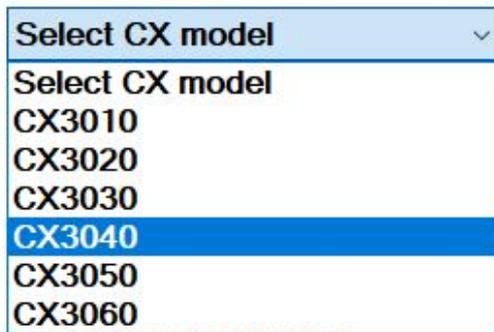

Remember that the PC must be set to the same IP range as the CX3000, or the IP address of the CX3000 must be changed so that it is in the same range as the connected PC.

2. Check that there is a connection to the IP address by pressing the PING button:

3. Select the version size CX3000 to configure:

CX3000 model

- Exceptions: For version CX3030 – CX3060, select which fan type is fitted, composite or metal:

Impeller type

Important: *Fan type* is country-configured. Only composite can be selected for DK and DE.

4. If a heating coil is fitted to the unit, select the correct coil type:

Heating coil

- Exceptions: If it is *version CX3030 – CX3060* and *electric heating coil* is selected, there are two sizes to choose from. Select the correct size from the list:

Size kW

5. Mark in the box if an electric preheating coil is fitted:

Electrical preheater

6. Check the box if filter housing is fitted on the supply air side:

Filter box on supply air

7. Mark in the box if a water cooling coil is fitted:

Cooling coil water

NB! Not possible if Combi coil is selected under Heating coil.

8. If you have extra accessories that need to be configured, such as a pressure transmitter, CO2 sensor (modbus) or other, check the box next to Extra equipment:

Additional accessories

- The box with options for additional equipment is now displayed. Check the box next to the accessories you want to configure.

VTH-6202: VOC/CO2 sensor duct (modbus)

PTH-6202: 2 pcs. pressure transmitters for Constant pressure control

PTH-6202: 1 pcs. pressure transmitter for Constant Supply pressure control

PTH-6202: 1 pcs. pressure transmitter for Constant Extract pressure control

TTH-6040-O: External outdoor temperature sensor (modbus)

TTH-6040-W: Room temperature sensor (modbus)

HMI-20T: 2" touch HMI with integrated temperature sensor (modbus)

PTH-6202

VTH-6202

TTH-6040-O

TTH-6040-W

HMI-20T

- NB! Only one type of *Constant Pressure regulation* can be selected & only *TTH-6040-W* OR *HMI-20T* can be selected.

9. The CX3000 is factory configured with some specific functions for digital outputs and inputs. However, it is possible to change functions for these if other signals are to be used. Check the box next to "Change digital output and input functions":

Change digital output and input functions

The boxes for entry and exit respectively now appear on the right-hand side:

Digital output 1, Terminals 13-14	Digital output 1, Terminals 13-14
Operation signal (default) ▾	Summer operation active ▾
Digital output 2, Terminals 15-16	Operation signal (default)
A-alarm output (default) ▾	B-alarm output
Digital input 1, Terminals 33-34	Alarm reset
High speed (default) ▾	Summer operation active
Digital input 2, Terminals 35-36	Summer night cooling activated
Fire alarm (default) ▾	High speed (default) ▾
	Digital input 2, Terminals 35-36
	Fire alarm (default) ▾

- NB! *The same function cannot be selected for both inputs and outputs.*

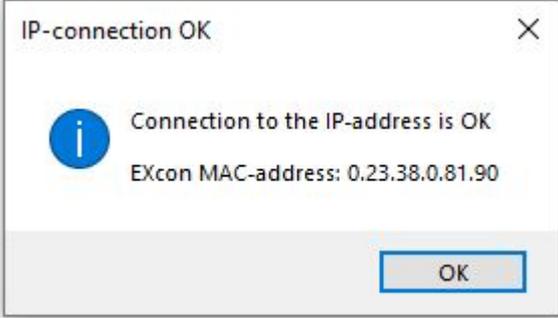

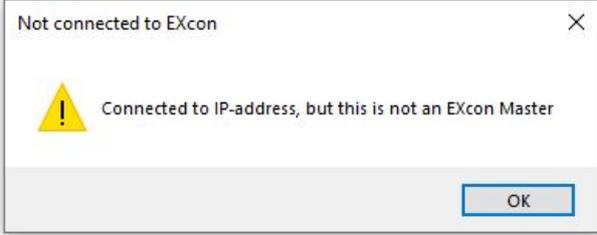

10. Once the different selections have been configured, you can send the configuration to the CX3000 unit by pressing "Upload to CX":

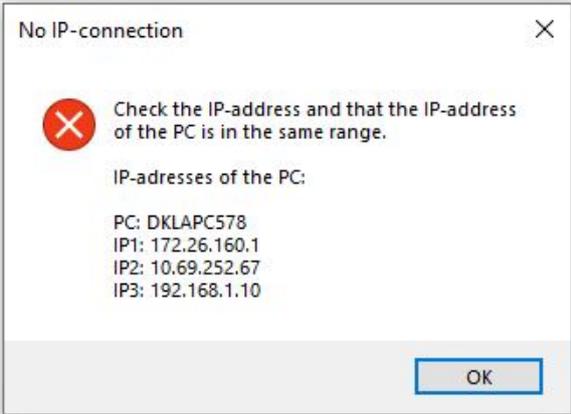

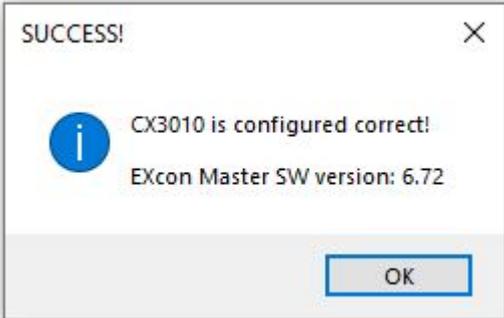

2. Functions

2.1 Functional description

Function	Description
	Opens the help menu
	Select the required language for the application
	Opens the CX3000 Installer program. Here you can adjust various parameters for the CX3000 unit in relation to operation of the unit, and read out the current values.
	Opens the CX3000 Commissions program. Here you can commission the CX3000 and read out actual values for a report, which can then be printed and signed.
	Enter the IP address of the CX3000 unit and EXcon Master to be configured here. To ensure that this is the correct IP address, it is a good idea to quickly test the IP address by pressing PING.
	If there is a connection to the IP address and an EXcon Master is connected, the IP connection OK box is displayed, where you can also read the MAC address of the EXcon Master that there is a connection to.
	Is there a connection to the IP address BUT not to an EXcon Master, the box Not connected to EXcon is displayed. This means that you get a response from the IP address, but it is not an EXcon Master to which the IP address belongs.

Function	Description
	<p>If there is NO connection to the IP address, the NO IP connection box is displayed.</p> <p>Here you need to check whether the IP address is correct and/or that the IP address on the PC is in the same range as EXcon Master.</p> <p>If the IP address for the EXcon Master and PC are not in the same range, they will not be able to communicate with each other.</p> <p>Current IP addresses found on the PC network card are displayed.</p> <p>If needed, set the IP address in EXcon to the same range.</p>
<p>Upload to CX</p> 	<p>When you press Upload to CX, the set configuration is automatically sent to EXcon Master.</p> <p>The CX3000 Configurator starts by deleting all data in EXcon Master and then installing the new configuration.</p> <p>Therefore, you can easily change the configuration and upload a new configuration if you have made an incorrect setting or selection.</p>
	<p>When the new configuration has been uploaded correctly and accepted by EXcon Master, the box SUCCESS! is displayed, where you can also read the current software version in the EXcon Master.</p> <p>If you have failed to test the IP address using the PING function and you try to upload configuration to either an unknown IP address or an IP address that does not belong to an EXcon Master, you will see the same error messages as described above.</p> <p>If you have several CX3000 units of the same version or the same accessories, it is a good idea to enter the IP address for the other CX3000 unit and upload the same configuration.</p> <p>If you close the CX3000 Configurator application, you will need to re-enter all information.</p>
<p><input checked="" type="checkbox"/> Change deicing strategy</p>	<p>In the case of CX3030 to CX3060, frost protection of the counterflow heat exchanger takes place as standard via a pressure loss measurement across the heat exchanger.</p> <p>If the pressure drop exceeds the limit value, the bypass damper opens for x number of seconds.</p>
<p><input type="radio"/> By exhaust air temperature</p> <p><input checked="" type="radio"/> By heat exchanger pressure drop</p>	<p>It is also possible to change the frost protection of the counterflow heat exchanger so that it fits with the exhaust air temperature.</p> <p>If the exhaust air temperature falls below the threshold value, the bypass damper will open modulating in relation to a set temperature P-band.</p>
